Aggregate retail and digital payment volumes

RBI Annual Reports 2023-24 and 2025-26; digital includes RTGS and excludes paper, retail excludes RTGS and includes paper

Definitions, method and limitations

Source	Reserve Bank of India, Annual Reports 2023-24 and 2025-26, Chapter IX, Table IX.1: Payment System Indicators - Annual Turnover (April-March).
Units	Volume is in lakh transactions; value is in ₹ lakh crore. Financial years run April to March.
Average ticket	Estimated as transaction value (₹ lakh crore) divided by volume (lakh transactions), multiplied by 10,000,000. RBI publishes rounded aggregate figures, so this is approximate.
Mode coverage	Selected modes include UPI, NEFT, IMPS, credit and debit cards, prepaid instruments and RTGS. RTGS is a large-value system and is not treated as a retail peer.
Comparisons	UPI share uses RBI total retail payment volume as the denominator. RBI's total digital aggregate includes RTGS and excludes paper-based instruments; total retail excludes RTGS and includes paper-based instruments. These aggregates are not nested, so no digital-to-retail share is calculated.
Limitations	Five annual observations do not show monthly seasonality or individual behaviour. The data are aggregate and cannot establish causes or forecast future activity.
Source rights	RBI statistics are attributed to the publisher. The author claims rights only over original code, SQL, notebook, narrative and visual design; see COPYRIGHT.txt.
